WARNING: Do NOT plug anything in until the ballast has been fully wired

ARO 150/175 and 250 watt Electronic Metal Halide Wiring Instructions

1. Connect one of the **BLUE** wires on the ballast to either wire on the HQI or mogul based lamp socket.
2. Connect the remaining **BLUE** wire on the ballast to the remaining wire on the HQI or mogul based lamp socket.
3. Connect the **BLACK** wire on the ballast to the **BLACK** wire on the grounded power cord.
4. Connect the **WHITE** wire on the ballast to the **WHITE** wire on the grounded power cord.
5. Connect the **GREEN** wire on the ballast to the **GREEN** wire on the grounded power cord. (this may require that you cut off the screw mount on both cords and wire them together) or you can mount both wires to something that is metal/grounded.
